Mount Mackay National Park Management Statement 2013

Vision
Mount Mackay National Park provides a secure habitat for species of significance particularly for the mahogany glider and southern cassowary.

Conservation purpose
Mount Mackay National Park transferred from State forest in 2005. It protects numerous species of conservation significance and associated habitat for those species.

Legislative framework
- Aboriginal Cultural Heritage Act 2003
- Environment Protection Biodiversity Conservation Act 1999 (Cwlth)
- Native Title Act 1993 (Cwlth)
- Nature Conservation Act 1992
- Wet Tropics World Heritage Protection and Management Act 1998

Plans and agreements
- Far North Queensland (FNQ) regional plan
- National recovery plan for the Mahogany Glider Petarurus gracilis
- Recovery plan for the southern cassowary Casuarius casuarius johnsonii 2001–2005
- Recovery plan for the stream-dwelling rainforest frogs of the Wet Tropics biogeographic region of north-east Queensland 2000–2004
- Wet Tropics of Queensland World Heritage Area Regional Agreement 2005

Thematic strategies
- Draft Level 2 Pest Management Strategy

Park size: 3.680ha
Bioregion: Wet Tropics
OPWS region: Northern
Local government estate/area: Cassowary Coast Regional
State electorate: Hinchinbrook

Ant-plant Myrmecodia beccarii. Photo: NPRSR
Protecting and presenting the park’s values

Landscape
Mount Mackay (724m) dominates the landscape on the park. The mountain is located on the western section of the park, facing Tully and the Tully Gorge National Park. Mount Douglas (339m) is on the eastern boundary of the park adjacent to Djiru National Park.

The Tully Mission Beach Road (Cassowary Drive) passes through the park. Vehicles have been attributed to the death of many native animals, including the endangered southern cassowary *Casuarius casuarius johnsonii*.

Regional ecosystems
Twenty-three regional ecosystems are mapped within Mount Mackay National Park. Of the 23 regional ecosystems mapped within the protected area, 11 are considered to have an endangered biodiversity status and eight are of concern (Table 1). These are generally those regional ecosystems from the coastal plain that have been extensively cleared for agricultural purposes.

Native plants and animals
The vulnerable ant plant *Myrmecodia beccarii* is a vulnerable species. It is primarily threatened by illegal collection and by exotic ants. The lifecycle of the apollo jewel butterfly *Hypochrysops apollo apollo* is linked with the ant plant and thus they suffer from the same threats.

Plants and animals of conservation significance are recorded in Table 2.

Birds listed under international agreements are listed in Table 3.

Aboriginal culture
The Djiru People are the Traditional Owners of this area and their native title claim (QC03/003) covers about half the park on the eastern section.

Partnerships
Queensland Parks and Wildlife Service (QPWS) is responsible for the day-to-day management of the national park. The Wet Tropics Management Authority regulates activity in the Wet Tropics World Heritage Area. The goal of both agencies is to present the area’s values while protecting its natural and cultural values.

Traditional Owners are involved in cooperative park management.

Other key issues and responses

Pest management
Mount Mackay National Park is within the Innisfail Level 2 Pest Management Strategy.

Fire management
There is currently no fire management strategy for Mount Mackay National Park.

Other management issues
There is a radio tower located on the top of Mount Mackay. Access is only possible by helicopter as there is no dedicated road access.

## Regional ecosystem

### Description

- **7.12.2** Notophyll or mesophyll vine forest with *Archontophoenix alexandrae* or *Licuala ramsayi*, on granites and rhyolites
  - Of concern

- **7.12.5** *Eucalyptus pellita* +/- *Corymbia intermedia* open forest, or *Acacia mangium* and *Lophostemon suaveolens* open forest (or vine forest with these species as emergents), on granites and rhyolites
  - Endangered

- **7.12.9** *Acacia celsa* open to closed forest on granites and rhyolites
  - Of concern

- **7.12.37** Rock pavements and see areas of wet lowlands, uplands and highlands of the eastern escarpment and central range (excluding high granite areas of Hinchinbrook Island and Bishops Peak) on granite and rhyolite, with *Allocasuarina* spp. shrublands and/or sedgelands
  - Of concern

- **7.12.40** Closed vineland of wind disturbed vine forest, on granites and rhyolites
  - Of concern

- **7.12.48** Wind-sheared notophyll vine forest of exposed granite and rhyolite ridge-crests and steep slopes
  - Of concern

- **7.12.60** *Melaleuca viridiflora* +/- *Corymbia clarksoniana* +/- *Eucalyptus platyphylla* woodland to open forest, on granite and rhyolite
  - Endangered
